PROJECT DETAILS

Final year project on **DESIGN OF ELECTRO-HYDRAULIC SUSPENSION SYSTEM IN AUTOMOBILE.**

Features-

Suspension depicts the Comfort & Safety in automobile industry. The suspension of road vehicle is usually designed with two objectives; to isolate the vehicle body from road irregularities and to maintain contact of the wheels with road way. This research is intended for modern electric dampers for variable loads consisting from different suspension setups in vehicles. The research will provide an effective suspension model where in the variable loads will be counter-reacted by auto stiffness circuit in the ECU. This circuit can be manualised using control levers or otherwise will decide the road surface integrity for any unbalance force using electronic sensors. In this model there is also a provision for application of the primary MR fluid which is been used in the standard model.
