To whom it may concern:

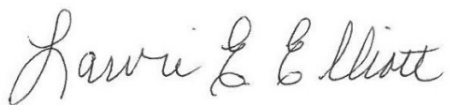

Bassam Alharbi worked on an engineering design and prototyping project for us as part of a Senior Design Project at the University of North Carolina Charlotte (UNCC) this past year. While he worked on various aspects of the project, he was also responsible for designing and prototyping the water system that included a filtration system and plumbing system for a laboratory shipping container in harsh conditions.

Bassam demonstrated an ability to grasp the vision and requirements for the system and find suitable solutions. He also was willing to receive constructive feedback and learn new innovations to match the requirements of the project. He was flexible and supportive of his team members from my observations.

Bassam has excellent verbal and written communication skills, as well as task and time management skills. He demonstrated these skills in various ways, such as in developing set-up and maintenance manuals for the water system he designed for us and in regular meetings between the Senior Design team and our team.

Bassam would be a tremendous asset to your company and has my highest recommendation. If you have any further questions with regard to his performance, please do not hesitate to call me.

Sincerely,

Lauri Elliott
